some fun ways to play

Function

Can write code, write novels, write essays, speeches, work reports, reading notes, contracts, etc.

confession:

> I am a large language model trained to help you answer all kinds of questions, such as questions about politics, history, science, technology, art, etc. I can help you understand some concepts and can also provide you with some information and insights. You can ask me questions, I can also help you write some articles or novels. You just need to give me some hints and background information, and I can write an article or novel for you based on the information you provide. I will try my best to write an excellent article for you and help you achieve your writing goals. In addition to answering questions and writing, I can also help you with text generation. If you want to generate some random text for you, you can provide me with some keywords or topics, and I can generate some random text based on the information you provide. The texts may be some famous quotes, sentences, paragraphs or short stories, which can be generated based on the information you provide. I will do my best to generate interesting text for you to help you achieve your goals. There are many other things that I can help you accomplish. For example, if you want to know the meaning of a word, you can ask me, and I will tell you the meaning of the word. If you want to know the details of some things, you can also ask me, I will try my best to provide you with valuable information. If you have any questions, you can ask me, I will try my best to answer you. Even this codebase is written by me.
>
> 1. Answer question. I was able to answer questions through text and provide information to the user.
> 2. Provide suggestions. I am able to provide professional advice according to the needs of users.
> 3. Calculate math problems. I can calculate simple math problems quickly and accurately.
> 4. Translate text. I am able to translate text quickly and accurately, supporting users to better understand the content.
> 5. Generate text. I am able to generate text based on the information provided to provide more information to the user.
> 6. writing. I can write according to the needs of users and provide users with high-quality text content.
> 7. Provide knowledge. I can provide professional knowledge and provide users with more information according to their needs.
> 8. provide the solution. I am able to provide solutions based on the questions raised by users and help users solve real problems.
> 9. Provide entertainment. I am able to provide entertainment content according to users' needs, providing users with joy and relaxation.
> 10. to chat. I with am able to communicate with users via text, providing entertainment and relaxation.

use

maven

```
<dependency>
    <groupId>com.github.plexpt</groupId>
    <artifactId>chatgpt</artifactId>
    <version>1.1.2</version>
</dependency>
```

gradle

```
implementation group: 'com.github.plexpt', name: 'chatgpt', version: '1.1.2'
```

Then

```
Chatbot chatbot = new Chatbot("session_token", "Mozilla/5.0 (Macintosh; Intel Mac OS X 10_15_7) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/110.0.0.0 Safari/537.36");
Map<String, Object> chatResponse = chatbot.getChatResponse("Hello, how are you?");
System.out.println(chatResponse.get("message"));
```

Note: A Chatbot instance is a Session, which holds the dialogue context, and can reply: continue to let the robot continue talking. If you need to isolate the conversations from each other, you can create multiple new Chatbot instances.

sessionToken acquisition

https://github.com/acheong08/ChatGPT/wiki/Setup#token-authentication

1. Register and log in via https://chat.openai.com/chat
2. Open the browser developer tools and switch to the Application tab.
3. Find the line __Secure-next-auth.session-token in Storage - Cookies on the left and copy its value
4. Find cf_clearance Copy
5. Get the user-agent in the network Copy

Note: If it prompts 403. Please check whether the above parameters are correct and whether they have expired. And the browser that obtains the above parameters must be at the same IP address as this program

Register Tutorial

https://juejin.cn/post/7173447849229253704

https://mirror.xyz/jboechen.eth/9O9CSqyKDj4BKUII7NC1SA?fbclid=IwAR1_tPsdeWv_QfFBc

You can also use the console directly

1. download
2. Edit sessionToken in config.json
3. run run.bat
4. Note: Enter twice after entering

Awesome ChatGPT

my list

If you have a cool project you want added to the list, open an issue.

Disclaimers

This is not an official OpenAI product. This is a personal project, not affiliated with OpenAI in any way.

This is a library and not intended for direct CLI use

CLI functionality is for demonstration and testing purposes only. Captcha not supported (for dirty IP addresses)

CLI use

@rawandahmad698 has a much better CLI tool at

PyChatGPT supports captcha!
